

WATCH-COMMANDER

SECURITY GUARD TRACKING, CONTROL, AND REPORTING SYSTEM

In the Security Industry, as in most industries, the name of the game is keeping clients happy by providing a quality product at a reasonable price. The difficulties start when security officers fail to meet their performance objectives. Supervision plays a key role in keeping officers performing up to specs, but supervisors can't be everywhere at the same time.

Supervisors need tools! Not tools that tell them after a problem has developed, but tools that tell them when it's developing, so it can be fixed before it becomes a huge client relations nightmare. Supervisors need Pro-Active tools that don't negatively impact the bottom line. If a solution is too expensive, is it really a solution?

Watch-Commander was designed by a security professional who worked in the industry at all levels from standing post officer to operations management, so the system is built from the ground up with real world knowledge and experience. Better still is Watch-Commander's best in the industry pricing, and our absolutely **FREE Lite Version** has never before been seen in the security industry.

- An Android Smart-Phone replaces a dedicated tracking device.
- The phone scans a barcode at each designated checkpoint location.
- It matches the current GPS coordinates against the coordinates for the scanned checkpoint.
- In real-time the location scan is transmitted to the web for your immediate viewing.
- Multiple authentication levels help insure that others cannot use your barcodes

- In Fact, if anyone scans one of your barcodes, they're directed to your company's homepage. How's that for free advertising?
- An internal phone timer reminds the officer before they're late for the next checkpoint location scan.
- The App is self-documenting and can remind officers where the checkpoints are located, keeping re-training to a minimum.
- Our proprietary Supervisor Connect feature gives you a simple color coded screen that summarizes the status of each active site.
- If an officer goes beyond a designated gap time, an automatic email lets supervisors know so little problems stay little.
- The system supports multiple logins for both supervisors and clients.
- Barcodes are printed by the system on your printers. (no additional software required)
- Clients love it because they can review and report on patrols anytime. Data is available online, seconds after the officer hits a checkpoint location.
- The mobile app lets officers send messages and photos to supervisors and/or clients.

We can go on and on with features, but at the end of the day, what's important is making your business as successful and profitable as possible! Watch-Commander is ready to help, with the Most cost effective officer tracking solution on the market today. Thanks for your time!
